

Innokentiy Kuznetsov

Web software developer

Personal information

Languages: English (IELTS 6.5), Russian.

Current location: [Ekaterinburg, Russia.](#)

Skills

HTML5, CSS3, JavaScript

Including ES2020, regular explanations, ShadowDOM, AJAX, design patterns etc. Feel confident with it. Can format code following Google JavaScript style guide or Air BnB rules. My JavaScript projects: [kumbhaka](#).

React & Redux

I gain some experience with this libraries creating [the cozy snake game](#) and [this website](#). You can [play](#) this game or view source code of it on my [GitHub](#).

Additional libraries: Router v.4, react-device-detect and many other.

TypeScript

I got the education through official tutorial and get a little practise in it.

jQuery

I obtain lite experience with it. It seems for me a little bit redundant, however I can work with it if it is necessary.

Node.js

I gain the very base knowledge of it, can build easy servers, feel myself interested to increase this skill.

mySQL

I got education on official website and created this small study project. You can see it's source code my [GitHub](#).

MongoDB

I get only a little experience with it in combination with mongoose library on Node.js server.

Auxiliary technologies

Npm, ESLint, JSDoc, GIT (GitHub), Zeplin

I used this technologies time after time while studying.

Other IT Skills

VBA (Visual Basic for Applications)

Confident with it. I used it in conjunction with Sapphere to build reports for regional finance ministries.

OpenOffice.org Basic

I used it to build small geographic information system to represent commercial data on city maps.

1C (Russian Axapta)

Sertified specialist. I worked with it to build and configurate accounting systems, building reports, connecting it with the equipment like eltctronic balances, magnetic card readers, check printers, etc.

Sapphire

SQL based platform, it's have it's own language for building multidimentional data spaces and reports based on this data for finance ministries of regions in Russia.

SQL 2003 Administrator

No certificate, but I get full education and woked with it in my past job.

Past Jobs

2016 / present time

Web developing studies.

2012 / present time

Private entrepreneur, volunteering.

2010 / 2012

Wurth-Eurasien

Position: Project manager

General objectives of the project: delivery, distribution, installation and servicing of the car diagnostic system “WOW (Wurth Online World) Snooper” which includes soft and hardware

components.

Side project: The creation of the geographic information system for internal use only. The purpose of the geoinformational system is to output data of sales and customers from “1C” (Russian Axapta) to the high-resolution map of the cities. The data can be displayed by different ways and colors depend on the parameters. I used OpenOffice.org Basic to create it.

2009 / 2010

Vitamin-Plus

Position: Specialist for the software integration

- 1C based software integration and improvement (integration with the front office software, writing code for automatic creation of the documents, calculations, printing forms, reports, etc. for a wide range of configurations);
- The shop equipment installation, adjustment and software integration (trading terminals, magnetic card readers, barcode scanners etc.)

2007 / 2009

Center for Informational and Finance Technologies (CIFT)

Position: Project manager

- Organization of the work group for software integration; negotiations with the customer, negotiations level till the minister of the region; preparation of project and contract documentation ; promotion of the software.

During this work I was awarded the silver mark of the Ministry of Finance of the Republic Sakha (Yakutia) for achievements in state finance digitalization.

Position: Specialist for the software integration

- Setting up and integration of software system (SS) Sapphire. This package is designed to automate the planning and forecasting of the budget in financial institutions of the regions of Russian Federation and municipalities (state finances). Setting up and integration includes: analysis of business processes for budget execution; engineering databases and configuration the SS for storing and processing information, including uploading data from external sources, and building reports (based on analysis and customer requirements); Configuring the SS is carried out both by internal languages, and using VBA for MS Office.
- Forming requirements specification for platform developers.
- Training of customer employees working with SS.

2006 / 2007

The Network of Pharmacies «Atoll-Pharm» / The Network of Pharmacies «36,6»
